Iowa Leading Indicators Index June 2012 Report

Tax Research and Program Analysis Section
Released August 2, 2012

The Iowa Leading Indicators Index (ILII) rose to 105.0 (100=1999) in June 2012 from a revised 104.9 in May. The Iowa non-farm employment coincident index recorded a 0.11 percent rise in June, which extends the streak of employment gains to twenty-one consecutive months.

The ILII's value increased 0.1 percent in June, after a 0.1 percent increase in May and a 0.2 percent decrease in April. During the six-month span through June, the ILII increased 0.5 percent (an annualized rate of 1.0 percent) and remained in positive territory for a fifth month. The six-month diffusion index was 50.0 with four of the eight components (average weekly manufacturing hours, residential building permits, initial unemployment insurance claims, and the Iowa stock market index) experiencing an increase of more than 0.05 percent over the last half a year.

In June, five of eight Iowa Leading Indicators Index components contributed positively. The positive contributors were average weekly manufacturing hours, the new orders index, residential building permits, diesel fuel consumption, and initial unemployment insurance claims (inverted). The Iowa stock market index, the national yield spread, and the agricultural futures profits index all contributed negatively.

Figure 1. Iowa Leading Indicators Index and Iowa Non-Farm Employment Coincident Index: January 1999-June 2012

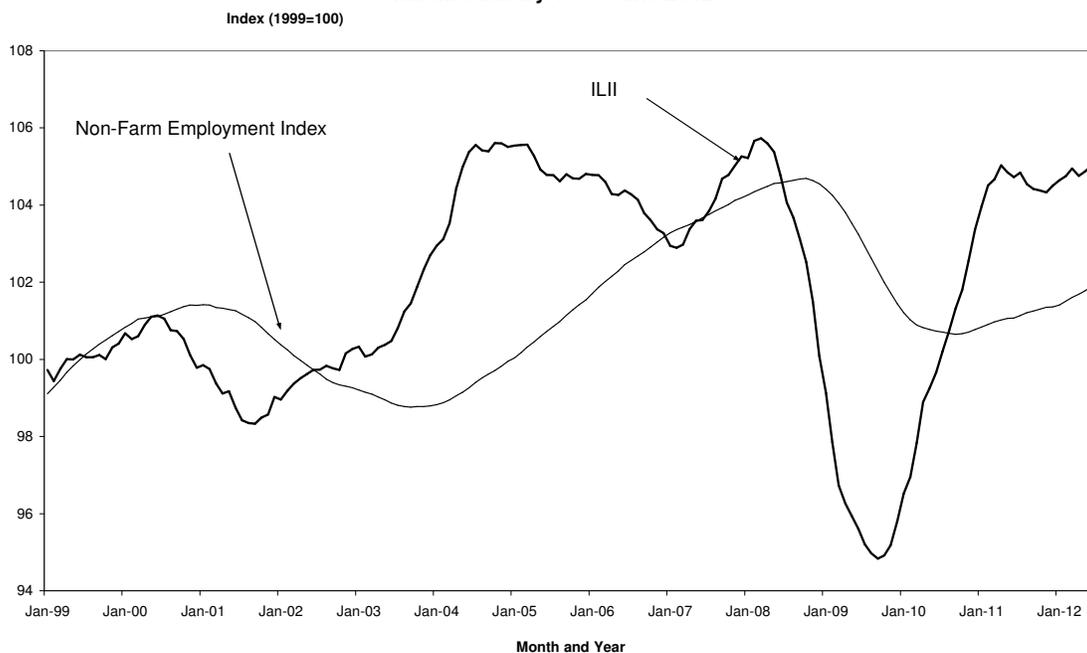

Table 1. Iowa Leading Indicators Index: Six Month Overview

Monthly Values	2012					
	January	February	March	April	May	June
ILII	104.6	104.7	104.9	104.8	104.9	105.0
Percentage Change ^a	0.1%	0.1%	0.2%	-0.2%	0.1%	0.1%
Diffusion Index ^b	56.3	50.0	68.8	37.5	62.5	62.5
Six-Month Values	Jul to January	Aug to February	Sep to March	Oct to April	Nov to May	Dec to June
ILII						
Percentage Change	-0.2%	0.2%	0.5%	0.4%	0.5%	0.5%
Annualized Percentage Change	-0.4%	0.4%	1.0%	0.7%	1.1%	1.0%
Diffusion Index	50.0	50.0	62.5	37.5	50.0	50.0

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced July 30, 2012.

a. Percentage changes in the ILII do not always equal changes in the level of the ILII due to rounding.

b. A diffusion index measures the proportion of components that are rising based on the actual changes (not the standardized contributions to the ILII). Components experiencing increases greater than 0.05 percent are assigned a value of 1.0, components that experience changes less than an absolute value of 0.05 percent are assigned a value of 0.5, and components experiencing decreases greater than 0.05 percent are assigned a value of 0.0.

Table 2. Iowa Leading Indicators Index Components: Six Month Overview

Component Series Monthly Values ^a	2012					
	January	February	March	April	May	June
AFPI ^b						
Corn Profits (cents per bushel)	342.0	335.3	329.5	316.2	304.1	291.0
Soybean Profits (cents per bushel)	525.1	511.3	502.9	501.2	498.9	491.9
Hog Profits (cents per pound)	24.6	25.0	25.1	24.5	24.0	24.4
Cattle Profits (cents per pound)	-1.9	-1.9	-2.4	-3.4	-3.9	-4.5
Iowa Stock Market Index (10=1984-86)	69.98	72.02	74.20	74.48	71.72	71.02
Yield Spread (10-year less 3-month)	1.94	1.88	2.09	1.97	1.71	1.53
Building Permits	637	650	657	633	671	679
Average Weekly Unemployment Claims ^d	3,673	3,640	3,573	3,521	3,469	3,460
Average Weekly Manufacturing Hours	40.4	40.5	40.5	40.7	40.8	40.9
New Orders Index (percent)	65.4	65.0	64.6	63.7	63.8	65.0
Diesel Fuel Consumption (mil gallons)	54.93	54.88	54.90	54.84	54.88	55.00

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced July 30, 2012.

a. For all component series except for the yield spread and the Iowa stock market index, the values represent 12-month backward moving averages.

b. The agricultural futures profits index is computed as the sum of the standardized symmetric percent changes in the four series, each weighted by the commodity's annual share of Iowa cash farm income (updated August 30, 2011).

c. Arrows indicate the direction of the series' contribution to the ILII for the latest month.

d. Changes in unemployment claims are inverted when added to the ILII, thus a negative change in the series contributes positively to the index.

ILII Components

- **Average weekly manufacturing hours:** Weekly average of hours worked in the manufacturing sector in Iowa. Changes are calculated based on a 12-month moving average. For June 2012, this component contributed 0.12 to the ILII value. June 2012 hours were 41.5 compared to 39.5 hours in June 2011, raising the 12-month moving average to 40.9.
- **New orders index:** Diffusion index measuring the share of purchasing managers in Iowa reporting increases in orders received for manufacturing output. Changes are calculated based on a 12-month moving average. In June, the monthly value of the index rose to 73.7 from 69.5 in May, and it was also above the value of 59.1 from a year ago. The 12-month moving average of the new orders index rose to 65.0, contributing 0.08 to the ILII.
- **Building permits:** Number of total permits issued in Iowa for the construction of residential housing units. Changes are calculated based on a 12-month moving average. For June, this component contributed 0.04 to the ILII with the 12-month moving average increasing to 679. June 2012 permits were 11.6 percent above the number of permits issued in June 2011, but still 35.0 percent below the historical average for June (1998-2008).
- **Diesel fuel consumption:** Number of taxable gallons of diesel fuel sold in Iowa. Changes are calculated based on a 12-month moving average. Diesel fuel consumption increased 2.5 percent between June 2011 and 2012, causing the 12-month moving average to rise slightly to 55.00 million gallons, and contributing 0.04 to the ILII value.
- **Average weekly unemployment claims:** Weekly average of initial claims for unemployment insurance in Iowa. Changes are calculated based on a 12-month moving average and are inverted when added to the ILII. This component contributed 0.01 to the ILII value. The 12-month moving average of claims fell to 3,460 with unemployment claims for the month 3.5 percent below June 2011 claims. However, initial claims for June 2012 were 15.3 percent above average historical June claims (1987-2008).
- **Iowa stock market index:** Capitalization-weighted index of 33 Iowa-based or Iowa-concentrated publicly-traded companies. During June 2012, 16 of the 33 companies gained value, including 8 of the 12 financial-sector companies. Despite the gains by half of the companies, the stock market index decreased to 71.02, contributing -0.02 to the ILII value.
- **Yield spread:** Difference between the yield on 10-year Treasury bonds and 3-month Treasury notes. During June, the yield spread fell to 1.53 percent as the long-term rate fell 18 basis points and the short-term rate held steady. For the month, the yield spread contributed -0.06 to the ILII.
- **Agricultural futures profits index:** Composite measure of corn, soybean, hog, and cattle expected profits, measured as the futures price less estimated breakeven costs, weighted by the respective share of Iowa annual cash receipts. Changes are calculated based on a 12-month moving average. During June, this component contributed -0.07 to the ILII value as the 12-month moving average of expected profits for all commodities, except hogs, declined. Compared to last year, corn prices are down 17.3 percent, soybean prices are down 0.2 percent, and expected profitability decreased for both in June. Cattle prices are up 9.1 percent over last year, but that increase was not enough to offset higher production costs. Hog prices increased 0.5 percent over last year and expected profitability also rose. The 2012 livestock breakeven costs produced by Iowa State remain preliminary as they update estimation methods.

Table 3. ILII Components and Standardization Factors for FY 2012

Iowa Leading Indicator Index Components	Standardization Factor
Agricultural Futures Profits Index	0.054
Iowa Stock Market Index	0.017
Yield Spread	0.326
Building Permits	0.037
Average Weekly Unemployment Claims	0.034
Average Weekly Manufacturing Hours	0.284
New Orders Index	0.062
Diesel Fuel Consumption	0.186

Source: Tax Research and Program Analysis Section, Iowa Department of Revenue, produced August 30, 2011
The standardization factors are the inverse of the standard deviation of the month-to-month changes in each component over the January 1999 to June 2011 period. These factors equalize the volatility of the contribution from each component and are normalized to one. The month-to-month changes are based on 12-month backward moving averages for all components except the yield spread and the Iowa stock market index. The yield spread and new orders index changes are simple arithmetic changes; month-to-month changes for the rest of the components are computed as symmetric percentage changes. The factors are updated annually during August.

Comments

The Iowa Leading Indicators Index (ILII) is designed to forecast the future direction of economic activity in the state of Iowa. The techniques used to build the ILII follow those used by The Conference Board to construct the national Leading Economics Index (LEI) prior to the 2001 revisions. A one-month movement in such an index does not produce a clear signal, rather it is necessary to consider the direction of the index over several consecutive months. A contraction signal in the ILII is considered reliable when two conditions are met: 1. The index declines by at least two percent over a six month period (using an annualized rate); and, 2. A majority of the individual components decline over those six months (the six-month diffusion index less than 50.0).

The Iowa non-farm employment coincident index measures the change in non-seasonally adjusted, total non-farm employment in the state of Iowa. Changes are based on a 12-month moving average of employment and are computed as symmetric percentage changes. The index is a representation of overall economic activity in Iowa.

The employment index and the ILII are constructed to have a value of 100 in the year 1999.
